The complete component management solution

SiliconExpert's BOM Manager software allows users to scrub groups of bills of materials and organize components based on product categories and suppliers. Empowered by SiliconExpert's Parts Database, the BOM Manager allows you to scrub, edit and fix your part list automatically. In addition to performing maintenance functions, the tool also provides Lifecycle, Datasheet, RoHS, PCN, Inventory, Chemical, Environmental and Cross Reference data.

The BOM Manager synchronizes and updates your part lists at a speed of upto 1,000 parts per minute. We pride ourselves in our ability to synchronize massive amounts of data at these tremendous speeds and continuing to push these benchmarks time after time.

Demo

The BOM Manager allows the user to quickly identify problem areas, run reports and identify risk associated with different components and suppliers. In addition to providing vital information such as the above, the tool also gives you access to inventory data from over 120 distributors. Combined with the Part Search tool by default, the BOM Manager truly becomes a complete component management tool.

Important features:

- Import and export of large bills of materials
- Fast response times
- BOM scrubbing with intelligent matching algorithms
- Risk analyses and assessments
- Single-click navigation
- Comprehensive dashboards
- 24x7x365 web access
